Multilayer Ceramic Capacitors

1. DESCRIPTION

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

WTC's MLCC is made by NP0, X7R, X6S, X7S and X5R dielectric material and which provides product with high electrical precision, stability and reliability.

2. FEATURES

- a. A wide selection of sizes is available (0201 to 1812).
- b. High capacitance in given case size.
- c. Capacitor with lead-free termination (pure Tin).

3. APPLICATIONS

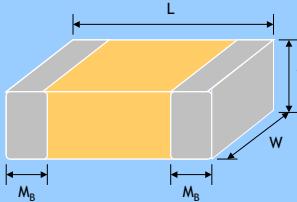

- a. For general digital circuit.
- b. For power supply bypass capacitors.
- c. For consumer electronics.
- d. For telecommunication.

#1: NP0, 0.1pF and 5pF<Cap<10pF products need to check with sales if it can supply A ($\pm 0.05\text{pF}$).

* Measured at the condition of 30~70% related humidity.

NP0: Apply 1.0 $\pm 0.2\text{VRms}$, 1.0MHz $\pm 10\%$ for Cap≤1000pF and 1.0 $\pm 0.2\text{VRms}$, 1.0kHz $\pm 10\%$ for Cap>1000pF, 25°C at ambient temperature

X7R/X6S/X5R/X7S: Please refer to page 13 "Reliability test conditions and requirements" for detail.

** Preconditioning for Class II MLCC: Perform a heat treatment at 150 $\pm 10\text{°C}$ for 1 hour and then leave in ambient condition for 24 ± 2 hours before measurement.

The general MLCC products are designed so that the useful lifetime can be extended longer than 10 years under the following conditions: ↑ 80% of the rated voltage or less, Maximum operating temperature -20 degree C or less. Extended useful lifetime, under specific operating conditions, can be estimated from the chart. ✽ The useful lifetime is the time when cumulative failure rate becomes 1%. ✽ Please note that the useful lifetime data is for reference only and not guaranteed.

The general MLCC products are designed for use in devices with a typical lifetime around 10 years. The general MLCC products are designed so that the useful lifetime can be extended longer than 10 years under the following conditions: ↑ 80% of the rated voltage or less, Maximum operating temperature -20 degree C or less. Extended useful lifetime, under specific operating conditions, can be estimated from the chart. ✽ The useful lifetime is the time when cumulative failure rate becomes 1%. ✽ Please note that the useful lifetime data is for reference only and not guaranteed.

Storage and handling conditions

- (1) To store products at 5 to 40°C ambient temperature and 20 to 70% related humidity conditions; MSL Level 1.
- (2) The product is recommended to be used within one year after shipment. Check solderability in case of shelf life extension is needed.

Cautions:

- a. The corrosive gas reacts on the terminal electrodes of capacitors, and results in the poor solderability. Do not store the capacitors in the ambience of corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine, ammonia gas etc.)
- b. In corrosive atmosphere, solderability might be degraded, and silver migration might occur to cause low reliability.
- c. Due to the dewing by rapid humidity change, or the photochemical change of the terminal electrode by direct sunlight, the solderability and electrical performance may deteriorate. Do not store capacitors under direct sunlight or dewing condition. To store products on the shelf and avoid exposure to moisture.

■ Recommended soldering conditions

The lead-free termination MLCCs are not only to be used on SMT against lead-free solder paste, but also suitable against lead-containing solder paste. If the optimized solder joint is requested, increasing soldering time, temperature and concentration of N₂ within oven are recommended.
